MODULE OVERVIEW
This module provides an introduction to the hand and power tools used in industrial maintenance. It covers safety procedures and techniques for use of these tools.

PREREQUISITES
Prior to training with this module, it is recommended that the trainee shall have successfully completed Core Curriculum and Industrial Maintenance E & I Technician Level One, Module 40101-07.

OBJECTIVES
Upon completion of this module, the trainee will be able to do the following:
1. Explain the purpose of each of the tools commonly used by industrial maintenance craftworkers.
2. Describe how to maintain each of the tools used by industrial maintenance craftworkers.
3. Demonstrate the proper use and basic maintenance of selected industrial maintenance tools.

PERFORMANCE TASKS
Under the supervision of the instructor, the trainee should be able to do the following:
1. Correctly use a pipe vise.
2. Correctly use a pipe threading machine.
3. Correctly use a cut-off machine.
4. Correctly use a portable power drive.
5. Demonstrate inspection and basic maintenance of tools chosen by the instructor.

SAFETY CONSIDERATIONS

Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module requires trainees to use hand and power tools. Ensure that all trainees are briefed on hand and power tools safety and any shop safety procedures.

ADDITIONAL RESOURCES

This module is intended to present thorough resources for task training. The following reference work is suggested for both instructors and motivated trainees interested in further study. This is optional material for continued education rather than for task training.

TEACHING TIME FOR THIS MODULE

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 5 hours are suggested to cover *Tools of the Trade*. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of the trainees may be noted during these exercises for Performance Testing purposes.

MODULE OVERVIEW
This module covers the hardware and systems used by an industrial maintenance craftperson. It also describes various types of anchors and supports, their applications, and how to install them safely.

PREREQUISITES
Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; and Industrial Maintenance E & I Technician Level One, Modules 40101-07 and 40102-07.

OBJECTIVES
Upon completion of this module, the trainee will be able to do the following:
1. Identify and explain the use of threaded fasteners.
2. Identify and explain the use of non-threaded fasteners.
3. Identify and explain the use of anchors.
4. Select the correct fasteners and anchors for given applications.
5. Install fasteners and anchors.

PERFORMANCE TASKS
Under the supervision of the instructor, the trainee should be able to do the following:
1. Install threaded fasteners.
2. Install selected screws.
3. Install selected anchors.
4. Install selected toggle bolts.

MATERIALS AND EQUIPMENT LIST
- Overhead projector and screen
- Transparencies
- Blank acetate sheets
- Transparency pens
- Whiteboard/chalkboard
- Markers/chalk
- Pencils and scratch paper
- Appropriate personal protective equipment
- Miscellaneous hand tools used with screws and bolts
- Various types of screws and bolts
- Various types of nuts
- Several types of washers
- Torque wrench
- Retaining rings
- Keys
- Motor
- Pin fasteners
- Taper, spring, and cotter pins
- Pop rivets
- Rivet gun
- Tie wraps
- Eye bolts
- Threaded inserts
- J-nuts
- Cage nuts
- One-step anchors
- Wedge anchors
- Stud bolt anchors
- Sleeve anchors
- Hammer-set anchors
- Threaded rod anchors
- Lead or caulk-in anchors
- Single- and double-expansion anchors
- Manufacturer’s literature on anchors
- Masonry anchors
SAFETY CONSIDERATIONS

Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module requires trainees to use hand and power tools. Emphasize basic tool safety.

ADDITIONAL RESOURCES

This module is intended to present thorough resources for task training. The following reference works are suggested for both instructors and motivated trainees interested in further study. This is optional material for continued education rather than for task training.

MODULE OVERVIEW
This module explains the safety requirements for oxyfuel cutting. It identifies oxyfuel cutting equipment and provides instruction for setting up, lighting, and using the equipment. It includes straight line cutting, piercing, beveling, and washing.

PREREQUISITES
Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40103-07.

OBJECTIVES
Upon completion of this module, the trainee will be able to do the following:
1. Identify and explain the use of oxyfuel cutting equipment.
2. State the safety precautions for using oxyfuel equipment.
3. Set up oxyfuel cutting equipment.
4. Light and adjust an oxyfuel torch.
5. Shut down oxyfuel cutting equipment.
6. Disassemble oxyfuel equipment.
7. Change empty cylinders.
8. Perform oxyfuel cutting:
   - Straight line and square shapes
   - Piercing and slot cutting
   - Bevels
   - Washing
9. Apply a rosebud flame to remove frozen components (also for preheat and expanding larger fittings).
10. Operate a motorized, portable oxyfuel gas cutting machine.

PERFORMANCE TASKS
Under the supervision of the instructor, the trainee should be able to do the following:
1. Set up oxyfuel equipment.
2. Light and adjust an oxyfuel torch.
3. Shut down and disassemble oxyfuel cutting equipment.
4. Perform oxyfuel cutting:
   - Straight line and square shapes
   - Piercing and slot cutting
   - Bevels
   - Washing
5. Operate a track burner.
SAFETY CONSIDERATIONS

Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module requires that the trainees operate oxyfuel cutting equipment. Ensure that trainees are briefed on fire and shop safety policies prior to performing any work. Emphasize the special safety precautions associated with the use of cylinders and oxyfuel cutting equipment.

MATERIALS AND EQUIPMENT LIST

Overhead projector and screen
Transparencies
Blank acetate sheets
Transparency pens
Whiteboard/chalkboard
Markers/chalk
Pencils and scratch paper
Appropriate personal protective equipment
  Safety goggles
  Face shields
  Welding helmets
  Ear protection
  Welding cap
  Leather jacket
  Leather pants or chaps
  Gauntlet-type welding gloves
  Respirators
ANSI Z49.1-1999
OSHA 29 CFR 1910.146
Brass valves
MSDS for cutting products
Oxygen cylinder with cap
Fuel gas cylinder with cap
Regulators (oxygen and fuel gas)
Hose set
One-piece cutting torch
Combination cutting torch and torch tips
Assorted acetylene, liquefied fuel gas, and special-purpose cutting torch tips

Tip cleaners
Tip drills
Mechanical guide
Cylinder cart
Motorized oxyfuel track cutter
Framing squares
Combination squares with protractor head
Tape measure
Soapstone
Penknife
Pliers
Chipping hammer
Friction lighter
Tip manuals and tip manufacturer’s charts
Vendor cutting tip chart
Wrenches (torch, hose, and regulator)
Examples of good and bad cuts
Steel plate
  Thin (16 to 10 gauge)
  Thick (¼ inch to 1 inch)
Steel pipe
Vises and pipe jacks to hold steel for cutting
Grinding equipment
Safety video/DVD (optional)
TV/VCR/DVD player (optional)
Copies of the Trade Terms Quiz*

   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
Gaskets and Packing
Annotated Instructor’s Guide

MODULE OVERVIEW
This module introduces types of gaskets and gasket material, types of packing and packing material, and types of O-ring material. It also explains the use and choice of gaskets, packing, and O-rings, and teaches how to fabricate a gasket.

PREREQUISITES
Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40104-07.

OBJECTIVES
Upon completion of this module, the trainee will be able to do the following:
1. Identify the various types of gaskets and explain their uses.
2. Identify the various types of gasket materials and explain their applications.
3. Lay out, cut, and install a flange gasket.
4. Describe the use of O-rings.
5. Explain the importance of selecting the correct O-ring for an application.
6. Select an O-ring for a given application and install it.
7. Describe the uses and methods of packing.

PERFORMANCE TASKS
Under the supervision of the instructor, the trainee should be able to do the following:
1. Lay out and install a gasket.
2. Cut and install packing.
3. Install O-rings.
MATERIALS AND EQUIPMENT LIST

Overhead projector and screen
Transparencies
Blank acetate sheets
Transparency pens
Whiteboard/chalkboard
Markers/chalk
Pencils and scratch paper
Appropriate personal protective equipment
Assorted gaskets
Gasket manufacturer’s literature including color coding chart
Pump manufacturer’s literature specifying replacement gaskets
Samples of some of the more common gasket materials
Hand tools for measuring and cutting gaskets
Dividers
Scribers
Steel rules
Adjustable gasket cutters
Hole punch sets
Mallets

Compasses with an ink pen holder and ink pens with silver or white ink
Gasket materials or old rubber inner tubes that can be cut up as substitute gasket material
Various types of packing
Old appliances, pumps, or valves with packing seals
Sheet metal
Tin snips
Bluing
Rags
Hand tools for assembling and disassembling valves and motors
Torque wrenches
Flanges
Old or broken equipment such as pumps, motors, and old appliances
Assorted O-rings
Packing manufacturer’s literature
Copies of Quick Quiz*
Module Examinations**
Performance Profile Sheet**

* Located in the back of this module.
**Located in the Test Booklet.
SAFETY CONSIDERATIONS

Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module may require trainees to work with equipment and cut gaskets. Ensure that all trainees are briefed on hand tool safety and have appropriate personal protection equipment.

ADDITIONAL RESOURCES

This module is intended to present thorough resources for task training. The following reference works are suggested for both instructors and motivated trainees interested in further study. This is optional material for continued education rather than for task training.

TEACHING TIME FOR THIS MODULE

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 10 hours are suggested to cover *Gaskets and Packing.* You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of the trainees may be noted during these exercises for Performance Testing purposes.

A. Review

B. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.

C. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
Module Overview

This module explains how to use ratios and proportions, solve basic algebra, area, volume, and circumference problems, and solve for right triangles using the Pythagorean theorem.

Prerequisites

Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40105-07.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Identify and explain the use of special measuring devices.
2. Use tables of weights and measurements.
3. Use formulas to solve basic problems.
4. Solve area problems.
5. Solve volume problems.
7. Solve right triangles using the Pythagorean theorem.

Performance Tasks

This is a knowledge-based module; there are no Performance Tasks.

Materials and Equipment List

- Overhead projector and screen
- Transparencies
- Blank acetate sheets
- Transparency pens
- Whiteboard/chalkboard
- Markers/chalk
- Pencils and scratch paper

MODULE OVERVIEW
This module introduces the trainee to plot plans, structural drawings, elevation drawings, as-built drawings, equipment arrangement drawings, P&IDs, isometric drawings, spool sheets, and detail sheets.

PREREQUISITES
Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40106-07.

OBJECTIVES
Upon completion of this module, the trainee will be able to do the following:
1. Explain the basic layout of a blueprint.
2. Describe the information included in the title block of a blueprint.
3. Identify the types of lines used on blueprints.
4. Identify common symbols used on blueprints.
5. Understand the use of architect’s and engineer’s scales.
6. Demonstrate the use of an architect’s scale.

PERFORMANCE TASKS
Under the supervision of the instructor, the trainee should be able to do the following:
1. Identify parts of a drawing:
   • Title block
   • Scales and measurements
   • Symbols and abbreviations
   • Notes
   • Revision blocks
   • Coordinates
2. Interpret the following:
   • Drawing indexes
   • Line lists
3. Identify the following types of drawings:
   • Plot plans
   • Structural drawings
   • Elevation and section drawings
   • P&IDs
   • Schematics
   • Circuit diagrams
   • Orthographic drawings

MODULE OVERVIEW
This module explains centrifugal, rotary, reciprocating, metering, and vacuum pump operation and installation methods, as well as types of drivers. It also covers net positive suction head and cavitation.

PREREQUISITES
Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; Industrial Maintenance E & i technician Level One, Modules 40101-07 through 40107-07.

OBJECTIVES
Upon completion of this module, the trainee will be able to do the following:
1. Identify and explain centrifugal pumps.
2. Identify and explain rotary pumps.
3. Identify and explain reciprocating pumps.
4. Identify and explain metering pumps.
5. Identify and explain vacuum pumps.
6. Explain net positive suction head and cavitation.
7. Identify types of drivers.

PERFORMANCE TASKS
Under the supervision of the instructor, the trainee should be able to do the following:
1. Identify centrifugal pumps.
2. Identify rotary pumps.
3. Identify reciprocating pumps.
4. Identify metering pumps.
5. Identify vacuum pumps.

* Located in the back of this module.
**Located in the Test Booklet.
SAFETY CONSIDERATIONS
Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. If you require trainees to visit power plants or utility areas, ensure that they are briefed on site safety procedures.

ADDITIONAL RESOURCES
This module is intended to present thorough resources for task training. The following reference work is suggested for both instructors and motivated trainees interested in further study. This is optional material for continued education rather than for task training.

TEACHING TIME FOR THIS MODULE
An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 5 hours are suggested to cover Pumps and Drivers. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of the trainees may be noted during these exercises for Performance Testing purposes.

H. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
MODULE OVERVIEW

This module identifies and provides installation methods for different types of valves. It also covers valve storage and handling.

PREREQUISITES

Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40108-07.

OBJECTIVES

Upon completion of this module, the trainee will be able to do the following:

1. Identify types of valves that start and stop flow.
2. Identify types of valves that regulate flow.
3. Identify valves that relieve pressure.
4. Identify valves that regulate the direction of flow.
5. Explain how to properly store and handle valves.
6. Explain valve locations and positions.

PERFORMANCE TASKS

Under the supervision of the instructor, the trainee should be able to do the following:

1. Identify types of valves that start and stop flow.
2. Identify types of valves that regulate flow.
3. Identify valves that relieve pressure.
4. Identify valves that regulate the direction of flow.
5. Demonstrate how to properly store and handle valves.
6. Demonstrate valve locations and positions.

E. Valve Selection, Types, and Applications

F. Valve Markings

G. Laboratory – Trainees practice identifying valve locations and positions. This laboratory corresponds to Performance Task 6.

H. Module Review

I. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.

J. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
MODULE OVERVIEW

This module introduces the basic test equipment that an industrial maintenance E & I technician might use, including tachometers, pyrometers, strobe meters, voltage testers, and automated diagnostic tools.

PREREQUISITES

Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40109-07.

OBJECTIVES

Upon completion of this module, the trainee will be able to do the following:

1. Explain the operation of and describe the following pieces of test equipment:
   - Tachometers
   - Pyrometers
   - Multimeters
   - Automated diagnostic tools
   - Wiggy® voltage tester
   - Stroboscope

2. Explain how to read and convert from one scale to another using the above test equipment.
3. Define frequency and explain the use of a frequency meter.

PERFORMANCE TASKS

Under the supervision of the instructor, the trainee should be able to do the following:

1. Demonstrate the use of the following pieces of test equipment:
   - Tachometer
   - Pyrometer
   - Multimeter
   - Voltage tester
   - Strobe light

2. Demonstrate the use of automated diagnostic tools chosen by the instructor.

MATERIALS AND EQUIPMENT LIST

| Overhead projector and screen | Volt-ohm-milliammeter and operator’s manual |
| Transparencies | Digital multimeter and operator’s manual |
| Blank acetate sheets | Clamp-type multimeter and operator’s manual |
| Transparency pens | Frequency meter and operator’s manual |
| Whiteboard/chalkboard | Tachometer and operator’s manual |
| Markers/chalk | Voltage tester and operator’s manual |
| Pencils and scratch paper | Strobe light and operator’s manual |
| Appropriate personal protective equipment | Pyrometer and operator’s manual |
| Gloves | Company safety manual |
| Rubber sleeves | Copies of the Quick Quiz* |
| Rubber blankets | Module Examinations** |
| Test circuits | Performance Profile Sheets** |

* Located in the back of this module
**Located in the Test Booklet.
SAFETY CONSIDERATIONS

Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module requires trainees to use various types of test equipment. Ensure that all trainees are briefed on electrical safety and any other shop safety procedures. This module may require that the trainees visit job sites. Ensure that trainees are briefed on site safety policies prior to any site visits.

ADDITIONAL RESOURCES

This module is intended to present thorough resources for task training. The following reference works are suggested for both instructors and motivated trainees interested in further study. These are optional materials for continued education rather than for task training.

TEACHING TIME FOR THIS MODULE

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 7½ hours are suggested to cover Introduction to Test Instruments. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of the trainees may be noted during these exercises for Performance Testing purposes.

Session III. Troubleshooting Motors, Review, and Testing

A. Troubleshooting Motors

B. Laboratory – Trainees practice using selected automated diagnostic tools. This laboratory corresponds to Performance Task 2.

C. Review

D. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.

E. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
MODULE OVERVIEW
This module introduces the maintenance craftworker to the equipment and techniques of material handling, and to the basic knowledge required for rigging and communicating with riggers.

PREREQUISITES
Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40110-07.

OBJECTIVES
Upon completion of this module, the trainee will be able to do the following:
1. Identify and describe the uses of common rigging hardware and equipment.
2. Inspect common rigging equipment.
3. Select, use, and maintain special rigging equipment, including:
   - Jacks
   - Block and tackle
   - Chain hoists
   - Come-alongs
4. Tie knots used in rigging.
5. Use and understand the correct hand signals to guide a crane operator.
6. Identify basic rigging and crane safety procedures.

PERFORMANCE TASKS
Under the supervision of the instructor, the trainee should be able to do the following:
1. Perform a safety inspection on hooks, slings, and other rigging equipment.
2. Select, inspect, and use special rigging equipment, including:
   - Block and tackle
   - Chain hoists
   - Come-alongs
   - Jacks
   - Tuggers
3. Tie knots used in rigging.
4. Determine the center of gravity of a load.
5. Properly attach rigging hardware for routine lifts.
6. Use and interpret hand signals.
7. Perform sling tension calculations.
MATERIALS AND EQUIPMENT LIST

SAFETY CONSIDERATIONS

Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module requires trainees to use various types of hoists, jacks, and tuggers. Ensure that all trainees are briefed on lifting safely and any other shop safety procedures. If you require trainees to visit job sites, ensure that trainees are briefed on site safety policies.

ADDITIONAL RESOURCES

This module is intended to present thorough resources for task training. The following reference works are suggested for both instructors and motivated trainees interested in further study. These are optional materials for continued education rather than for task training.

TEACHING TIME FOR THIS MODULE

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 15 hours are suggested to cover *Material Handling and Hand Rigging*. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of the trainees may be noted during these exercises for Performance Testing purposes.

   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
MODULE OVERVIEW

This module explains the safety procedures and methods of operation for motorized support equipment, including forklifts, manlifts, compressors, and generators.

PREREQUISITES

Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; and Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40111-07.

OBJECTIVES

Upon completion of this module, the trainee will be able to do the following:

1. State the safety precautions associated with the use of motor-driven equipment in industrial plants.
2. Explain the operation and applications of the following motor-driven equipment commonly used in industrial plants:
   - Portable generators
   - Air compressors
   - Portable pumps
   - Aerial lifts
   - Forklifts
   - Mobile cranes
3. Operate and perform preventive maintenance on the following equipment:
   - Portable generators
   - Air compressors
   - Aerial lifts

PERFORMANCE TASKS

Under the supervision of the instructor, the trainee should be able to do the following:

1. Describe an aerial lift inspection.

Session IV. Review, Module Examination, and Performance Testing

A. Review

B. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.

C. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
MODULE OVERVIEW
This module explains lubrication safety, storage, and classifications. It also explains selecting lubricants, additives, lubrication equipment, and lubricating charts.

PREREQUISITES
Please refer to the Course Map in the Trainee Module. Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum; and Industrial Maintenance E & I Technician Level One, Modules 40101-07 through 40112-07.

OBJECTIVES
Upon completion of this module, the trainee will be able to do the following:

1. Explain OSHA hazard communication as pertaining to lubrication.
2. Read and interpret a material safety data sheet (MSDS).
3. Explain the EPA hazardous waste control program.
4. Explain lubricant storage.
5. Explain lubricant classification.
7. Explain properties of lubricants.
8. Explain properties of greases.
9. Explain how to select lubricants.
10. Identify and explain types of additives.
11. Identify and explain types of lubricating oils.
12. Identify and use lubrication equipment to apply lubricants.
13. Read and interpret a lubrication chart.

PERFORMANCE TASKS
Under the supervision of the instructor, the trainee should be able to do the following:

1. Read and interpret an MSDS.
2. Identify and use lubricating equipment to apply lubricants.
3. Read and interpret a lubrication chart.

MATERIALS AND EQUIPMENT LIST
Overhead projector and screen
Transparencies
Blank acetate sheets
Transparency pens
Whiteboard/chalkboard
Markers/chalk
Pencils and scratch paper
Appropriate personal protective equipment
MSDS for lubricants
Lubricants with various viscosities
Heat source

Various types of grease
Product literature for lubricants with additives or lubricant additives
Lubricating oils or product literature on lubricating oils
Manual lubricating equipment:
   Lever gun
   Transfer pump
   Gear lube dispenser
   Bucket pump
Power-operated lubrication equipment
SAFETY CONSIDERATIONS

Ensure that the trainees are equipped with appropriate personal protective equipment and know how to use it properly. This module requires trainees to use various types of lubricants and lubricating equipment. Review hazards associated with each type of lubricant and additive and general precautions needed when using, storing, and disposing of lubricants.

ADDITIONAL RESOURCES

This module is intended to present thorough resources for task training. The following reference works are suggested for both instructors and motivated trainees interested in further study. These are optional materials for continued education rather than for task training.

Chevron Salesfax Digest, available through Chevron Lubricant Sales Offices and Suppliers, published yearly.
Mobil Brief Products Descriptions, available through Mobil Lubricant Sales Offices and Suppliers, published yearly.

TEACHING TIME FOR THIS MODULE

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 12½ hours are suggested to cover Lubrication. You will need to adjust the time required for hands-on activity and testing based on your class size and resources.

Sessions III and IV. Equipment and Methods

A. Manual Lubricating Equipment
B. Power-Operated Lubricating Equipment
C. Lubrication Fittings
D. Lubricating Methods
E. Laboratory – Trainees practice identifying and using lubricating equipment to apply lubricants. This laboratory corresponds to Performance Task 2.
F. Lubrication Charts
G. Laboratory – Trainees practice reading a lubrication chart. This laboratory corresponds to Performance Task 3.

Session V. Review, Module Examination, and Performance Testing

A. Review
B. Module Examination
   1. Trainees must score 70% or higher to receive recognition from NCCER.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
C. Performance Testing
   1. Trainees must perform each task to the satisfaction of the instructor to receive recognition from NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the Performance Testing requirements.
   2. Record the testing results on Craft Training Report Form 200, and submit the results to the Training Program Sponsor.
Module Overview

This module covers shielded metal arc welding (SMAW) safety, types of SMAW equipment, and how to set up SMAW equipment for use.

Prerequisites

Prior to training with this module, it is recommended that the trainee shall have successfully completed the following: Core Curriculum and Welding Level One, Modules 29101-09 through 29106-09.

Objectives

Upon completion of this module, the trainee will be able to do the following:

1. Identify and explain shielded metal arc welding (SMAW) safety.
2. Explain welding electrical current.
3. Identify welding power supplies and their characteristics.
4. Explain how to set up welding power supplies.
5. Set up a machine for welding.
6. Identify tools used for weld cleaning.

Performance Tasks

Under the supervision of the instructor, the trainee should be able to:

1. Set up a SMAW machine for welding.

Materials and Equipment List

- Markers/chalk
- Pencils and scratch paper
- Whiteboard/chalkboard
- Multimedia projector and screen
- Desktop or laptop computer
- Appropriate personal protective equipment
- Welding cables
- Lugs and quick disconnects
- Workpiece clamps
- Electrode holders
- Electrical plugs used with welding machines and matching electrical outlets
- Chipping hammers
- Wire brushes
- Files
- Pneumatic weld flux chipper
- Pneumatic needle scaler
- Transformer welding machine
- Transformer-rectifier welding machine
- Motor generator welding machine
- Engine-driven generator welding machine and alternator
- (If any of these welding machines are unavailable, provide photos instead)
- Module Examinations*
- Performance Profile Sheets*

*Located in the Test Booklet

Safety Considerations

Ensure that the trainees are equipped with appropriate personal protective equipment. Review general safety guidelines associated with arc welding and engine-driven machinery, including electrical safety and procedures to prevent carbon monoxide poisoning. Explain that welding machines are heavy and can cause injury if they fall on people. Proper rigging devices and procedures must be used when lifting and moving welding machines. Emphasize that welding sparks can cause batteries to explode, showering the area with acid.
Additional Resources

This module is intended to present thorough resources for task training. The following reference works are suggested for both instructors and motivated trainees interested in further study. These are optional materials for continued education rather than for task training.

- **OSHA Standard 1926.351, Arc Welding and Cutting.**

Teaching Time for this Module

An outline for use in developing your lesson plan is presented below. Note that each Roman numeral in the outline equates to one session of instruction. Each session has a suggested time period of 2½ hours. This includes 10 minutes at the beginning of each session for administrative tasks and one 10-minute break during the session. Approximately 5 hours are suggested to cover SMAW – Equipment and Setup. You will need to adjust the time required for hands-on activity and testing based on your class size and resources. Because laboratories often correspond to Performance Tasks, the proficiency of the trainees may be noted during these exercises for Performance Testing purposes.

Session II. Laboratory; Review and Testing

A. Laboratory
   Trainees practice setting up a machine for welding.

B. Module Review

C. Module Examination
   1. Trainees must score 70% or higher to receive recognition from the NCCER.
   2. Record the testing results on Craft Training Report Form 200 and submit the results to the Training Program Sponsor.

D. Performance Testing
   1. Trainees must complete each task to the satisfaction of the instructor to receive recognition from the NCCER. If applicable, proficiency noted during laboratory exercises can be used to satisfy the performance testing requirements.
   2. Record the testing results on Craft Training Report Form 200 and submit the results to the Training Program Sponsor.
