As energy efficiency is becoming a priority for homeowners across America, many are turning to the weatherization industry to assist in their efforts. NCCER’s Weatherization program offers training that exceeds the existing standards for weatherization technicians, crew chiefs, and building auditors. This program combines existing NCCER curricula with new building science modules that address the specific needs of this industry. Dual credentials are available within this program. Note: Instructors wishing to teach NCCER’s Weatherization program must meet specific qualifications. For more information, contact NCCER Customer Service at 1-888-622-3720.

**Curriculum Notes**
- 90 Hours
- Published: 2010
- Introduction to Weatherization, combined with NCCER’s Core Curriculum, makes up Fundamentals of Weatherization and is intended to introduce trainees to the concepts and skills they will need to successfully complete Weatherization Technician Level One.

**FUNDAMENTALS OF WEATHERIZATION**

**PAPERBACK**
- Trainee Guide: $67
- 978-0-13-237661-7

**Individual Modules:** $20
- see module list

The Weatherization Green Value Pack combines the Core Curriculum, Introduction to Weatherization, Weatherization Technician Level One, and Your Role in the Green Environment to offer a curriculum package that meets the needs of organizations implementing green initiatives within their programs. This curriculum package also meets Perkins requirements and state guidelines for contact hours within high school programs.

**Weatherization Green Value Pack**
- Trainee Guide: $149
- 978-0-13-267252-8

The cover of this book was printed on FSC approved paper by Lehigh Phoenix. The text pages of this book were also printed and bound on FSC certified fiber and printed with vegetable-based inks by Courier Kendallville, Inc.

**Your Role in the Green Environment**

“With resource depletion and global warming affecting the human race, Your Role in the Green Environment is more than just a book. It is an essential text for adapting to—and possibly reversing—these changes. This is an exceptionally important tool for up-to-date knowledge and clear understanding of the green environment, green construction practices, and green building rating systems.”

Weatherization Level 1

L1 WEATHERIZATION TECHNICIAN

Curriculum Notes

- 145 Hours
- Includes 90 hours of Fundamentals of Weatherization which is a prerequisite for Level One completion and must be purchased separately.
- Published: 2010
- Downloadable instructor resources that include module tests, PowerPoints®, and performance profile sheets are available at www.nccer.org/irc.

PAPERBACK

Trainee Guide: $67
Individual Modules: $20 see module list

MODULES

The modules listed below are included in the Trainee Guide. The following ISBNs are for ordering individual modules only.

Wood and Masonry Construction Methods (12.5 Hours)
(Module ID 33102-10; from Electronic Systems Technician Level One) Describes how to read and interpret a set of commercial drawings (Module ID 27201-07; from Carpentry Level Two, Fourth Edition) Reviews the materials and techniques used in constructing and finishing residential and commercial buildings, including wood frame, brick and block, and post and beam. Covers common drills, bits, and techniques used to drill through wood and masonry. Also describes types of fasteners used with these materials.

Thermal & Moisture Protection (7.5 Hours)
(Module ID 27203-07; from Carpentry Level Two, Fourth Edition) Covers the selection and installation of various types of insulating materials in walls, floors, and attics. Also covers the uses and installation practices for vapor barriers and waterproofing materials.

Weatherization Level 1

Covers the principles of venting fossil fuel furnaces and methods for selecting and installing vent systems for gas-fired heating equipment. Defines the issues associated with indoor air quality and its effect on the health and comfort of building occupants. Provides guidelines for performing an IAQ survey and covers the equipment and methods used to monitor and control indoor air quality.

Concretes and Management Practices (30 Hours)
(Module ID 33103-10; from Electronic Systems Technician Level One) Describes the materials and techniques used in constructing and finishing residential and commercial buildings, including poured and precast concrete and structural steel. Covers common drills, bits, and techniques used to drill through concrete and steel. Also describes types of fasteners used with these materials.

Concrete and Steel Construction Methods (12.5 Hours)
ISBN 978-0-13-266284-0
(Module ID 33103-10; from Electronic Systems Technician Level One) Describes the materials and techniques used in constructing and finishing residential and commercial buildings, including poured and precast concrete and structural steel. Covers common drills, bits, and techniques used to drill through concrete and steel. Also describes types of fasteners used with these materials.

Commercial Drawings (25 Hours)
(Module ID 27201-07; from Carpentry Level Two, Fourth Edition) Describes how to read and interpret a set of commercial drawings and specifications.

Masonry and Sidewalks (5 Hours)
(Module ID 33105-10; from Electronic Systems Technician Level One) Describes the skills that must be learned for the craftperson who plans to move into leadership roles. Introduces human resource concepts and concepts for the first time in the series.

Introduction to Supervisory Skills (15 Hours)
(Module ID 33108-07; from HVAC Level One, Third Edition) Covers the fundamentals of heating systems and the combustion process. Provides the different types and designs of gas furnaces and their components, as well as basic procedures for their installation and service.

Chimneys, Vents, and Flues (5 Hours)
(Module ID 03202-07; from HVAC Level Two, Third Edition) Covers the principles of venting fossil fuel furnaces and methods for selecting and installing vent systems for gas-fired heating equipment.

Introduction to Heating (15 Hours)
(Module ID 33103-10; from Electronic Systems Technician Level One) Describes the materials and techniques used in constructing and finishing residential and commercial buildings, including wood frame, brick and block, and post and beam. Covers common drills, bits, and techniques used to drill through wood and masonry. Also describes types of fasteners used with these materials.

Sealing the Building Envelope (25 Hours)
(Module ID 59102-10) Describes how to correct heat losses and gains by applying insulating materials to uninsulated areas of the building envelope. Describes how to reduce air infiltration by applying caulks and other materials. Also explains how to patch drywall and install weatherstripping.

Insulating Pipes, Ducts, and Water Heaters (10 Hours)
(Module ID 59103-10) Describes how to insulate water pipes and water heaters, and explains how to make simple duct system repairs, seal air leaks in a duct system, and insulate ducts to reduce heat loss.

Sealing the Building Envelope (25 Hours)
(Module ID 59102-10) Describes how to correct heat losses and gains by applying insulating materials to uninsulated areas of the building envelope. Describes how to reduce air infiltration by applying caulks and other materials. Also explains how to patch drywall and install weatherstripping.

Insulating Pipes, Ducts, and Water Heaters (10 Hours)

(Module ID 27201-07; from Carpentry Level Two, Fourth Edition) Describes how to read and interpret a set of commercial drawings and specifications.

Chimneys, Vents, and Flues (5 Hours)
(Module ID 03202-07; from HVAC Level Two, Third Edition) Covers the principles of venting fossil fuel furnaces and methods for selecting and installing vent systems for gas-fired heating equipment.

Introduction to Heating (15 Hours)
(Module ID 33103-10; from Electronic Systems Technician Level One) Describes the materials and techniques used in constructing and finishing residential and commercial buildings, including wood frame, brick and block, and post and beam. Covers common drills, bits, and techniques used to drill through wood and masonry. Also describes types of fasteners used with these materials.

Introduction to Supervisory Skills (15 Hours)
(Module ID 03410-09; from HVAC Level Four, Third Edition) Describes the skills that must be learned for the craftperson who plans to move into leadership roles. Introduces human resource concepts and concepts for the first time in the series.

Introduction to Cooling (30 Hours)
(Module ID 03107-07; from HVAC Level One, Third Edition) Explains the fundamental operating concepts of the refrigeration cycle and identifies both primary and secondary components found in typical HVAC/R systems. Also introduces common refrigerants. Describes the principles of heat transfer and the essential pressure-temperature relationships of refrigerants. Introduces basic control concepts for simple systems.

Air Distribution Systems (10 Hours)
(Module ID 03109-07; from HVAC Level One, Third Edition) Describes the factors related to air movement and its measurement in common air distribution systems. Presents the required mechanical equipment and materials used to create air distribution systems. Introduces basic system design principles for both hot and cold climates.

Air Quality Equipment (5 Hours)
(Module ID 03204-07; from HVAC Level Two, Third Edition) Covers principles, processes, and devices used to control humidity and air cleanliness, as well as devices used to conserve energy in HVAC systems.

Indoor Air Quality (15 Hours)
(Module ID 03403-09; from HVAC Level Four, Third Edition) Defines the issues associated with indoor air quality and its effect on the health and comfort of building occupants. Provides guidelines for performing an IAQ survey and covers the equipment and methods used to monitor and control indoor air quality.

Diagnostics and Management Practices (30 Hours)
(Module ID 03201-07; from HVAC Level One, Third Edition) Defines the issues associated with indoor air quality and its effect on the health and comfort of building occupants. Provides guidelines for performing an IAQ survey and covers the equipment and methods used to monitor and control indoor air quality.

**PAPERBACK**

Trainee Guide: $97

**MODULES**

The modules listed below are included in the Trainee Guide. The following ISBNs are for ordering individual modules only.

**Trade Mathematics** (10 Hours)
(Module ID 03102-07; from HVAC Level One, Third Edition) Explains how to solve HVAC/R trade-related problems involving the measurement of lines, area, volume, weights, angles, pressure, vacuum, and temperature. Also includes a review of scientific notation, powers, roots, and basic algebra and geometry.

**Introduction to Heating** (15 Hours)
(Module ID 03108-07; from HVAC Level One, Third Edition) Covers the fundamentals of heating systems and the combustion process. Provides the different types and designs of gas furnaces and their components, as well as basic procedures for their installation and service.

**Introduction to Cooling** (30 Hours)
(Module ID 03107-07; from HVAC Level One, Third Edition) Explains the fundamental operating concepts of the refrigeration cycle and identifies both primary and secondary components found in typical HVAC/R systems. Also introduces common refrigerants. Describes the principles of heat transfer and the essential pressure-temperature relationships of refrigerants. Introduces basic control concepts for simple systems.

**Chimneys, Vents, and Flues** (5 Hours)
(Module ID 03202-07; from HVAC Level Two, Third Edition) Covers the principles of venting fossil fuel furnaces and methods for selecting and installing vent systems for gas-fired heating equipment.

**Introduction to Hydronic Systems** (10 Hours)
ISBN 978-0-13-266312-0
(Module ID 03203-07; from HVAC Level Two, Third Edition) Introduces hot water heating systems, focusing on safe operation of the low-pressure boilers and piping systems in residential applications.

**Heating and Cooling System Design** (25 Hours)
(Module ID 03407-09; from HVAC Level Four, Third Edition) Identifies factors that affect heating and cooling loads. Explains the process by which heating and cooling loads are calculated, and how load calculations are used in the selection of heating and cooling equipment. Covers basic types of duct systems and their selection, sizing, and installation requirements.

**Energy Conservation Equipment** (10 Hours)
(Module ID 03404-09; from HVAC Level Four, Third Edition) Covers heat recovery/reclaim devices, as well as other energy recovery equipment used to reduce energy consumption in HVAC systems.

**Indoor Air Quality** (15 Hours)
(Module ID 03403-09; from HVAC Level Four, Third Edition) Defines the issues associated with indoor air quality and its effect on the health and comfort of building occupants. Provides guidelines for performing an IAQ survey and covers the equipment and methods used to monitor and control indoor air quality.

**Alternative Heating and Cooling Systems** (10 Hours)
(Module ID 03409-09; from HVAC Level Four, Third Edition) Describes alternative devices used to reduce energy consumption, including wood, coal, and pellet-fired systems; waste-oil heaters, geothermal heat pumps; solar heating; in-floor radiant heating, and direct-fired makeup units. Also introduces application-specific computer room environmental and air turnover systems.

**Performing a Building Audit** (42.5 hours)
(Module ID 59202-10) Explains how to interview homeowners and educate them about saving energy in their homes. Explains how to inspect and evaluate the building envelope and HVAC systems. Describes how to perform the following tests: blower door, pressure pan, burner efficiency, carbon monoxide, draft, and spillage. Also covers lead-safe work practices, baseload energy use, and the purpose of the forms and reports a building auditor is responsible for completing.
