NCCER Facilitated Construction Superintendent Certification Program

Now is the time to elevate your construction superintendents with the leadership, business and project management skills they need to succeed.

NCCER's Construction Superintendent Certification Program goes beyond field experience, providing structured training in people management, business acumen and profitability. This turnkey solution allows organizations to invest in their workforce without having to develop their own instruction.

Designed for both current and aspiring superintendents, this online, facilitated program combines independent learning with interactive instruction. Participants complete an online course every two weeks, followed by a live, instructor-led session with a Master Trainer to reinforce key concepts, discuss real-world applications, and collaborate with peers. This structured approach ensures superintendents gain the leadership and business expertise needed to excel in their roles.

**The next National Cohort
begins August 12th and runs
through December 2nd.**

Participants complete an online course every two weeks, then join a live, instructor-led session at 11:00 am ET (10:00 am CT) via Zoom to review and reinforce their learning.

- **Facilitated** by NCCER Master Trainer Mike Farrar
- **Topics** include leadership, ethics, contracts, risk management, and project closeout
- **\$3,825** per participant

Meet Your Instructor

Mike Farrar has over 42 years of experience in the construction industry, working with craft, field supervision, and project management teams on various commercial and industrial projects.

Before retiring in 2022, Mike managed training events and programs, including scheduling and facilitating all training, researching and preparing course curricula, and supervising staff trainers. Mike is an NCCER Master Trainer, which allows him to deliver the NCCER curriculum in developing our next generation of skilled craft and field leaders.
